WHO WE ARE

In 2017 we came across an eye opening statement that 8 million tonnes of plastic waste is being dumped in our oceans every year. Plastic manufacturing has increasing exponentially from 2.3 million tonnes in 1950 to 448 million tonnes in 2015.

With the surge in plastic trash across world and the alarming data surrounding climate change, Tavos was built in 2018 under the leadership of Justin Lee & Michael Fong to fight against plastic waste and transform the society, thus making it a better place to live.

Tavos Industries is a forward-thinking Canadian manufacturer of paper straws and eco-friendly food packaging to tackle the issue of single-use plastics. "Collaboration Propels Innovation" is our mantra and we have created a whole zone of innovation wherein we collaborate with like-minded people or eco-warriors who have great green ideas and are looking for a platform to convert their dream into reality.

We not only take pride in manufacturing world class superior eco-friendly products, but in our drive to inspire further changes in our society to become cleaner and greener.

INNOVATION

Tavos provides a platform where your ideas are given life.

If you have an amazing idea for green products or services, but unsure how to begin, come visit us at Tavos. At Tavos we specialize in turning single-use plastic items into eco-friendly alternatives, no matter the shape, size or function we have the technology and expertise to make high-quality sustainable replacements. With our world-class manufacturing capability and the right resources, we will make your green dream a reality.

PAPER PRODUCTS

Black Paper Straws

Maple Leaf Paper Straws

Paper Cup Lids

Paper Drinking Cups

Paper Takeout Boxes
(3 Compartments)

Paper Plates
(3 Sectioned)

CUSTOM MANUFACTURING

FOOD GRADE COATING

Tavos is proud to introduce a new eco-friendly service of food-grade coating! Our eco-friendly food coating works by adding an additional layer to the container that is both hydrophobic and greaseproof. This layer is completely bio-degradable and isn't made of polyethylene (PE) like many other paper containers.

As an example when our coating is placed on a pizza box it will stop grease and water from damaging the container, both of which makes the cardboard soggy and unusable.

Our coating services can not only make containers water and greaseproof but with our patented technique, we can make our coating temperature and scratch-resistant as well. Tavos food-grade coating works on containers and cups of all sizes.
