WHAT A WASTE 2.0

A global snapshot of solid waste by 2050

Until urgent action is taken,
by **2050** global waste will
increase to **3.4 Billion Tons**
and ocean plastic waste to
850-950 Million Tons which
will outweigh our fish stocks

- 1) extended producer responsibility
- 2) single-use and disposable products
- 3) national performance requirements and standards
- 4) incentives for a circular economy
- 5) infrastructure investment

During its G7 Presidency, Canada championed the Ocean Plastics Charter, which contains commitments to work towards the following goals:

- 100% reusable, recyclable or compostable alternatives do not exist, reduce plastic waste by 50% by 2030
- at least 50% recycled content in new products where applicable
- with other orders of government, increase recycling and reuse of at least 55% of plastic packaging by 2030 and the recovery of 100% of all plastics by 2040

\$1.2 billion in new costs

2. Single-Use & Disposable Plastic Products

Develop a roadmap to address priority single-use and disposable plastics most commonly released into the environment by 2030.

ideal and move closer to a zero-waste future. Canada needs to increase its efforts to reduce waste. Currently, it is estimated that only 10% of all plastic in Canada is recycled. Considered plastic from all sources, including plastics that have traditionally been

nard to collect and recycle like those plastics found in some packaging, clothing, cars, and construction and commercial waste.

Who Are We

In 2017 we came across an eye opener statement of 8 millions tons plastic waste which is being dumped in our oceans every year. Plastic manufacturing is increasing exponentially from 2.3 million tons in 1950 to 448 million tons in 2015.

With a surge in plastic trash across world and the alarming data surrounding climate change, Tavos was built under the leadership of Justin Lee & Michael Fong to fight against the plastic waste and transform the society, thus making it a better place to live. “Simple solution with greater impact” is the mantra of Tavos.

We not only take pride in inspiring the society for switching to eco-friendly alternatives but we also believe in manufacturing the world class superior quality products.

Our Vision

Inspire society to make a positive change in our way of life by implementing simple solutions with a big impact.

Our Mission

Reducing Waste in our planet by replacing single-use plastic disposables with eco-friendly compostable alternatives.

Our Footprints...

World class
superior quality

Air pollution free
Safety
